

# rtsetse example1 savannah grass boundary

*Andy South*

*2015-12-16*

[rtsetse](#) is an R package that simulates tsetse fly populations on a spatial grid of different vegetation types to enable investigation of tsetse control.

This document shows results of a simulation on a simple map, half savannah and half grassland.

The following maps show the distribution of males and females over the progress of the simulation.
